Empathy Map

Date	18 October 2026
Team ID	Rahul-DS633
Project Name	CrimeVision AI - Intelligent Multimodal Crime Scene Reconstruction
Maximum Marks	2 Marks

Target Persona: Senior Forensic Detective / Crime Scene Investigator

THINKS & FEELS • 'Did we overlook a concealed weapon in the shadows?' • 'Will this digital evidence withstand cross-examination?' • 'I wish I had an interactive 3D view to test line-of-sight.' • Overwhelmed by gigabytes of raw CCTV and chaotic 911 calls.	**HEARS** • Panicked eyewitnesses with overlapping voices on 911 tapes. • Demands from prosecutors for fast evidence dossiers. • Defense attorneys questioning timestamp discrepancies. • Technicians recommending expensive 3D laser scanners.
SAYS & DOES • 'We need a clear chronological breakdown of suspect entry.' • Manually notes timestamps from video footage with pen and paper. • Listens to recordings with headphones attempting translations. • Takes dozens of 2D photos hoping they capture perspective.	**SEES** • Complex, cluttered crime scenes with evidence tags. • Low-resolution, grainy surveillance footage. • Multiple monitor windows: VLC, photo viewer, Word. • Intimidating backlog of cases awaiting judicial reporting.
PAINS (Frustrations & Obstacles) • Siloed tools with zero automated cross-referencing. • Hours wasted manually synthesizing timelines. • Lack of 3D spatial depth in standard 2D photos. • Language barriers causing lost leads during the golden hour.	**GAINS (Wants & Needs)** • Instant unified multimodal timeline from CCTV + 911 audio. • Interactive 3D spatial crime scene walkthrough inside browser. • Automated, verifiable court-admissible PDF reports with SHA-256. • Natural-language AI assistant for rapid evidence interrogation.
