| **Team ID** | Rahul-DS633 |
| **Project Name** | CrimeVision AI - Multimodal Crime Scene Reconstruction |
| **Maximum Marks** | 2 Marks |

## Target Persona: Senior Forensic Detective / Crime Scene Investigator

**Name:** Inspector Vikram / Detective Lead • **Role:** Digital Evidence & Physical Reconstruction Lead • **Setting:** Urban Law Enforcement Forensic Division

**THINKS & FEELS**

• 'Did we overlook a concealed weapon or blood splatter hidden in the shadow?'
• 'Will this digital evidence withstand scrutiny during cross-examination?'
• 'I wish I had an interactive 3D view of the room to test witness line-of-sight.'
• Feels overwhelmed by dozens of gigabytes of raw CCTV and chaotic 911 calls.

**HEARS**

• Panicked, weeping eyewitnesses with overlapping voices on 911 audio tapes.
• Demands from senior leadership and public prosecutors for fast evidence dossiers.
• Defense attorneys questioning timestamp discrepancies between CCTV and logs.
• Technicians recommending complex, expensive 3D laser photogrammetry tools.

**SAYS & DOES**

• 'We need a clear chronological breakdown of who entered through which door.'
• Manually notes timestamps from video footage with pen and paper.
• Listens to witness recordings with headphones while attempting rough translations.
• Takes dozens of 2D photos hoping they sufficiently capture room perspective.

**SEES**

• Complex, cluttered crime scenes with overturned furniture and evidence tags.
• Low-resolution, grainy surveillance footage with timestamp overlays.
• Multiple monitor windows open simultaneously: VLC player, photo viewer, Word.
• An intimidating backlog of forensic cases awaiting judicial reporting.

**PAINS (Frustrations & Obstacles)**

• Siloed tools with zero automated cross-referencing.
• Hours wasted manually synthesizing timelines.
• Lack of 3D spatial depth in standard 2D photos.
• Language barriers causing lost leads during the golden hour.

**GAINS (Wants & Needs)**

• Instant unified multimodal timeline from CCTV + 911 audio.
• Interactive 3D spatial crime scene walkthrough inside web browser.
• Automated, verifiable court-admissible PDF reports with SHA-256 integrity.
• Natural-language conversational AI assistant for rapid evidence interrogation.
